Heat Pumps

MAKE YOUR BUSINESS MORE ENERGY EFFICIENT

Columbia River PUD's Heat Pump Program provides consultation, quality assurance and financial assistance to the PUD's customers. The program maximizes the efficient use of electricity through installation of high-quality, energy-efficient heat pump systems and ductwork.

Eligibility

This program is available to commercial customers who receive electric service from Columbia River PUD. Eligible facilities include office or retail spaces that are less than 5,000 square feet in size and are heated by electric resistance heat.

Quality Assurance

Participating heat pump dealers have agreed to install heat pump systems in accordance with our rigid installation standards.

Rebates

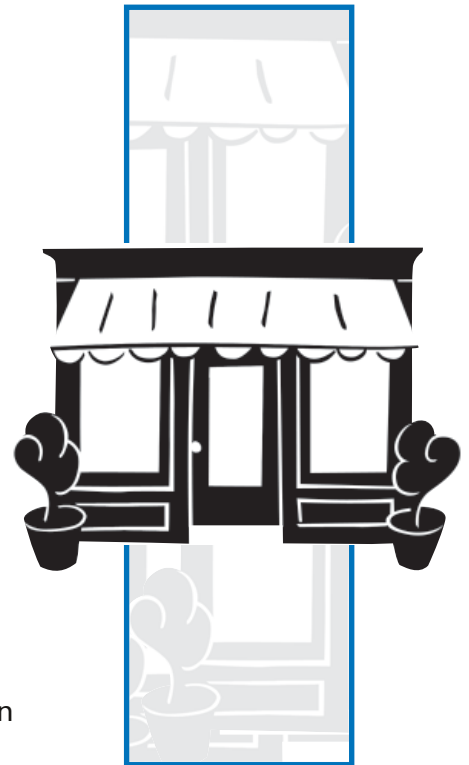

We offer rebates to customers who install heat pumps through our program. The amount varies depending on the efficiency level of the heat pump:

Heat Pump with 8.5 and up HSPF/ 14.0 and up SEER: \$1,300.00

Heat Pump with 8.0 to 8.49 HSPF / 13.0 to 13.99 SEER: \$750.00

HSPF (Heating Season Performance Factor) is a performance rating standard that accounts for changes in outdoor temperature, defrosting, fans, supplemental heat, and on/off cycles.

SEER (Seasonal Energy Efficiency Ratio) denotes efficiency in air conditioning mode.

Step-by-Step process

1. Contact a participating dealer to arrange for a free consultation.
2. The dealer will inspect your business and prepare a written proposal. A copy of the proposal will be given to you and another copy, which includes heat load calculations and other important information, will be sent to us for review.
3. We will review the proposal and notify the dealer whether the system qualifies.
4. The dealer will install your new heat pump system according to PUD and manufacturer specifications, then forward installation documentation to us for review.
5. Upon receipt of the installation documentation, we will schedule an inspection of your new system. After a satisfactory inspection, we will send you a rebate check.

Participating dealer list

The following heat pump dealers have agreed to follow our rigid set of installation specifications for heat pump systems. These rigorous specifications are designed to result in high-quality installations that afford greater comfort and equipment longevity, with lower operating costs than typical installations.
